Presented by **Amanda N. Sulicz**,
Associate Editor, AIP Publishing

Scientific papers may have a rigidly defined structure and can be largely considered “artless prose,” but there’s still room to tell a compelling story that clearly communicates the science. This presentation discusses how to structure research papers to attract the readers’ attention and ensure that writers get the message across to their audience.

The presentation will offer ideas and examples on how to compose an abstract that communicates effectively and create a title that is informative, accurate, clear, and concise.
