

SIAM Proceedings

Unlock the future of applied mathematics

SIAM Proceedings brings you the latest cutting-edge research in applied mathematics, computational science, artificial intelligence, machine learning, and data science presented at conferences and symposia around the world. The collection is vital for readers in both academia and industry to stay up to date with emerging techniques and ideas in these rapidly evolving fields.

SIAM is an independent society publisher where quality still matters. We publish a select number of proceedings each year to ensure that the highest standard is maintained.

Going back to 2001, the collection includes 12 series, 97 volumes, and more than 5,800 chapters, with more content and new series being added every year. Existing series include:

- Algorithm Engineering & Experiments (ALENEX)
- Algorithmic Principles of Computer Systems (APOCS)
- Analytic Algorithmics and Combinatorics (ANALCO)
- Applied and Computational Discrete Algorithms (ACDA)
- Combinatorial Scientific Computing (CSC)
- Control and its Applications
- Data Mining
- Discrete Algorithms (SODA)
- International Meshing Roundtable (IMR)
- International Congress of Mathematicians (ICM)
- Mathematics for Industry
- Parallel Processing for Scientific Computing (PP)
- Simplicity in Algorithms (SOSA)

The SIAM Proceedings Collection is available to institutions from 2026 onwards either as an annual subscription or one-time perpetual purchase (with one-time perpetual add-ons for future years). SIAM academic members receive discounted pricing.
